Digital technologies have transformed the way many creative works are generated, disseminated and used. They have made cultural products more accessible, challenged established business models and the copyright system, and blurred the boundary between

Media Today uses convergence as a lens that puts students at the center of the profound changes in the 21st century media world. Through the convergence lens they learn to think critically about the role of media today and what these changes mean for their lives presently and in the future. The book's media systems approach helps students to look carefully at how media is created, distributed, and exhibited in the new world that the digital revolution has created. In this way, Media Today goes beyond the traditional mass communication textbook's focus on consuming media, to give students an in.

"The definitive guide to more than 1,300 eco-friendly businesses and resources"--Cover.

This volume features representative studies focusing on the evolution of text genres in corporate and professional communication. Genre change is explored in various contexts in light of the increasing importance of new media and the profound social changes that have occurred in the last few decades. Major theoretical issues are raised and discussed, highlighting the need to reconsider the repertoire of conventions traditionally identified in each specific genre, and to reassess and update the analytical tools used to investigate them, about three decades after the emergence of genre analysis.

This book is the third of three volumes that illustrate the concept of social networks from a computational point of view. The book contains contributions from a international selection of world-class experts, with a specific focus on knowledge discovery and visualization of complex networks (the other two volumes review Tools, Perspectives, and Applications, and Security and Privacy in CSNs). Topics and features: presents the latest advances in CSNs, and illustrates how organizations can gain a competitive advantage from a better understanding of complex social networks; discusses the design and use of a wide range of computational tools and software for social network analysis; describes simulations of social networks, and the representation and analysis of social networks, highlighting methods for the data mining of CSNs; provides experience reports, survey articles, and intelligence techniques and theories relating to specific problems in network technology.

Roti, Kapada & Makaan Our very own Indian Dream falls short of its credibility in today's world where people spend incredible amount and time on temporary investments like food and fashion but have zero information and knowledge about land. In the Indian scenario, every other sector has websites, advertising segments and crores spent on updating the trends in fashion, vehicles and consumer goods, but so little is said and done about the real estate sector. In reality, the truth is that every business and literally the whole world works on the financial viability of land/property. People have always been intimidated by land and the intricate yet simple intelligence that is required to be an owner of a property. This book aims to bridge the gap between the common man and the extensive knowledge available on the internet and in reality. There are no wise investments, only wise people who arm themselves with ample knowledge and push ahead by hard work. These people take success and failure as two sides of a coin and forge pathways towards building a legacy of their own. Your journey starts here! My journey through the concrete jungle of realty for the past three decades has provided me with the knowledge that 'people dictate progress,' not vice versa. Invest in land, and it will definitely take care of you. The most reliable and dependable part of humanity is the land we stand on. Invest in it, nurture it and make it an asset for the generations to come. Lion .Dr Kiron (Builder, Businessman, Philanthropist & Globetrotter) [www.earthshashtra.com](http://www.earthshashtra.com)

A disturbing trend faces education in the U.S.—not plagiarism but academic forgery (students purchasing and signing their names to work produced by others). This book, by a former professional forger, describes the difference between the two and presents case studies along with an exposé of the trade. The author provides a thorough treatment of the topic and reveals the serious implications for the future of academia. Educators should educate themselves about forgery and join the conversation about solving the problem.

*Teaching and Learning at a Distance* is written for introductory distance education courses for preservice or in-service teachers, and for training programs that discuss teaching distant learners or managing distance education systems. This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs. The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education. In this text we take the following themes: The first theme is the definition of distance education. Before we started writing the first edition of *Teaching and Learning at a Distance* we carefully reviewed the literature to determine the definition that would be at the foundation of our writing. This definition is based on the work of Desmond Keegan, but is unique to this book. This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica. The second theme of the book was the importance of research to the development of the contents of the book. The best practices presented in *Teaching and Learning at a Distance* are validated by scientific evidence. Certainly there are “rules of thumb”, but we have always attempted to only include recommendations that can be supported by research. The third theme of *Teaching and Learning at a Distance* is derived from Richard Clark’s famous quote published in the *Review of Educational Research* that states that media are mere vehicles that do not directly influence achievement. Clark’s controversial work is discussed in the book, but is also fundamental to the book’s advocacy for distance education – in other words, we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn. Distance delivered instruction is not a “magical” approach that makes learners achieve more. The fourth theme of the book is equivalency theory. Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment. Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom. The final theme for *Teaching and Learning at a Distance* is the idea that the book should be comprehensive – that it should cover as much of the various ways instruction is made available to distant learners as is possible. It should be a single source of information about the field.
