Rodd's Chemistry of Carbon Compounds, Volume II: Alicyclic Compounds, Part B: Six- and Higher-Membered Monocarbocyclic Compounds explores the synthesis and chemistry of compounds of the cyclohexane group and those containing rings of seven, eight, and more carbon atoms. This volume is composed of four chapters, and begins with the occurrence, formation, properties, derivatives, and synthesis of compounds of the cyclohexane group. The next two chapters are devoted to the chemistry of compounds of the monoterpene group and the carotenoids. The final chapter deals with the synthesis of the cycloheptane, cyclo-octane, and other macrocyclic compounds. This book is directed toward organic chemists and researchers.

Information theory is an exceptional field in many ways. Technically, it is one of the rare fields in which mathematical results and insights have led directly to significant engineering payoffs. Professionally, it is a field that has sustained a remarkable degree of community, collegiality and high standards. James L. Massey, whose work in the field is honored here, embodies the highest standards of the profession in his own career. The book covers the latest work on: block coding, convolutional coding, cryptography, and information theory. The 44 contributions represent a cross-section of the world's leading scholars, scientists and researchers in information theory and communication. The book is rounded off with an index and a bibliography of publications by James Massey.

Vol. 65, 69, 74, etc. include Berichte der Kommission für Oceanographische Forschungen im Rothen Meere.

Wie die hier vorgelegten Untersuchungen zeigen möchte, bietet die Arithmetik aus Euklids Elementen besonders gute Chancen für einen Erfolg bei der Suche nach Spuren, die das Wissen der Völker des Alten Orients in der griechischen Mathematik hinterlassen hat. Dazu kommt, daß uns eine Reihe von Tontafeln aus dem Alten Orient eine erste Einsicht in gewisse Rechen- und Begründungsmethoden bieten, die man dort spätestens seit dem 3.

vorchristlichen Jahrtausend anzuwenden wußte. Zu der Vorstufe der Keilschrift, in der diese Texte abgefaßt sind, gehören nämlich Ziffern und metrologische Zeichen, die erkennen lassen, daß ihre Schreiber beim Lösen von arithmetischen Aufgaben Rechensteine zu benutzen pflegten. Dieser operative Umgang mit Rechensteinen, der in, den Schreiberschulen immer neuen 'Schülergenerationen' vermittelt worden ist, führte bereits im Alten Mesopotamien zur Entdeckung und Begründung einer Reihe von Einsichten, die methodisch und inhaltlich zu den Anfängen der griechischen Arithmetik gehören, doch das wird erst im Rahmen der nachfolgend zur Diskussion gestellten Untersuchungen deutlich werden.

Houben-Weyl is the acclaimed reference series for preparative methods in organic chemistry, in which all methods are organized according to the class of compound or functional group to be synthesized. The Houben-Weyl volumes contain 146 000 product-specific experimental procedures, 580 000 structures, and 700 000 references. The preparative significance of the methods for all classes of compounds is critically evaluated. The series includes data from as

far back as the early 1800s to 2003. // The content of this e-book was originally published in 1961.

This publication was made possible through a bequest from my beloved late ~ wife. United together in this present collection are those works by the author which have not previously appeared in book form. The following are excerpted: Vorlesungen tiber Differential und Integra1rechnung (Lectures on Differential and Integral Calculus) Vo1s 1-3, Birkhiiuser Verlag, Basel (1965-1968); Aufgabensamm1ung zur Infinitesima1rechnung (Exercises in Infinitesimal Calculus) Vo1s 1, 2a, 2b, and 3, Birkhiiuser Verlag, Basel (1967-1977); two issues from Memorial des Sciences on Conformal Mapping (written together with C. Gattegno), Gauthier-Villars, Paris (1949); Solution of Equations in Euclidean and Banach Spaces, Academic Press, New York (1973); and Stu dien tiber den Schottkyschen Satz (Studies on Schottky's Theorem), Wepf & Co., Basel (1931). Where corrections have had to be implemented in the text of certain papers, references to these are made at the conclusion of each paper. In the few instances where this system does not, for technical reasons, seem appropriate, an asterisk in the page margin indicates wherever a correction is necessary and is then given at the end of the paper. (There is one exception: the correc this tions to the paper on page 561 are presented on page 722. The works are published in 6 volumes and are arranged under 16 topic headings. Within each heading, the papers are ordered chronologically according to the date of original publication.
